

## Hosted Servers

### i-VServer

### *Consolidate your critical applications and data in a secure and protected environment*

**i-VServer** is a hosted virtual server offering from I-Evolve. **i-VServer's** servers reside in the I-Evolve secure hosted cloud and are accessed via the public internet or a private connection. Through its robust architecture, built-in security measures and backup, I-Evolve facilitates a business-class hosted server experience.

I-Evolve built its **i-VServer** offering from the ground up with "cloud" in mind; security, control, usability were all key features. But most of all, you will get the support you need to migrate to the cloud and the flexibility from I-Evolve as your business partner to work within requirements.

I-Evolve has a team of advanced system administrators who specialize in every area of server and application management, like Database Administration, Web Administration, Storage Administration, Security, Networking and Virtualization. They're certified and experienced, and they're yours whenever you need them, at a fixed hourly rate or as part of an I-Evolve Retainer program.
