

Hosted Desktop

i-VDesktop

Take your desktop wherever you want to work

Why go to the office to access data on your physical desktop computer when your “desktop” can go everywhere with you?

I-Evolve revolutionizes the relationship between you and your desktop by transforming your traditional desktop into a virtual machine that you can access securely, via the Internet (cloud) – anytime, anywhere, with any device.

i-VDesktop will dramatically improve your business agility, bolster your workforce mobility and productivity, and significantly reduce your desktop costs.

All you need is a PC, laptop, thin client or mobile device and an internet connection. We do the rest. Because we provide you with a full Windows environment with all the functionality you’d expect, you’d never know you weren’t using a PC. Additional applications can be installed on demand, while I-Evolve manages and maintains the hosted desktops for you, ensuring your desktop is available 24 /7.

i-VDesktop Business Benefits

- Reduce hardware and maintenance costs.
- Reduced volume of support calls.
- Reduced labor costs.
- Simplified upgrades and new deployments.
- Increased lifetime of assets - Thin clients last longer than traditional desktops.
- Reduce power costs – Thin clients use 1/3 the power of traditional desktops.
- Centralized security policies that avoid the need for on-location remedial work.

i-VDesktop: Hosted Desktop

Reduce Hardware And Maintenance Costs

By delivering desktops from the data center, I-Evolve significantly reduces your per-desktop support costs.

When you upload a security patch or software update to the master copy, all virtual desktop users are automatically served the updated Standard Operating Environment (SOE) the next time they log in.

Your applications can be packaged and maintained in one place for all users. Any software issues can be fixed in one place.

And because **i-VDesktop** is a hosted service, you can shift costs from capital expenditures to operating expenses- better aligning your costs with your use and business cycles.

Improve Security

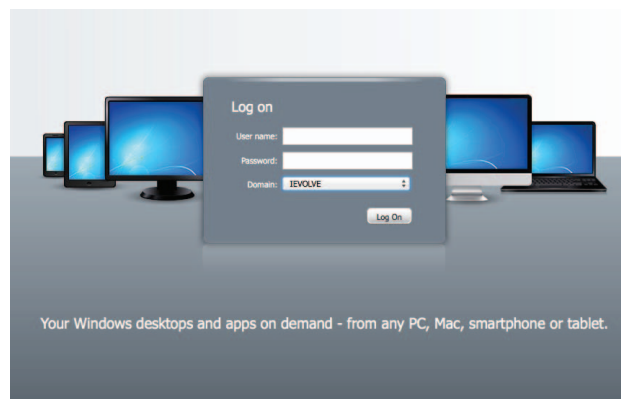

In the new era of cyber threats, malicious agents are sponsored by nation-states that seek access to your organization's most sensitive data. Cyber security is more important than ever.

i-VDesktop offers superior security over traditional desktops or laptops.

By maintaining your mobile workers' sensitive data within the data center, I-Evolve eliminates any concern about loss or theft of an employee's laptop.

By centralizing the management of security, regulatory compliance, business continuity, disaster recovery and information governance, I-Evolve rolls out security patches and updates and backs up employee data in the background.

Employees can access the applications they need from virtually anywhere - without compromising security.

Go Greener

Traditional desktop devices use significantly more power, and generate more greenhouse gases than energy-efficient desktop instances maintained within a data center.

Thin clients, smart phones, tablets and other devices are much more energy efficient

than traditional desktops, so use of these also reduces power usages and allows your organization to go greener.

Unlike a physical desktop, which is left on during the work day, whether it is being used or not, virtual desktop computing capacity is mostly apportioned as needed which reduces waste.
